

PRECISION CORE PINS

Custom Pins for the Medical Device Industry

Precision Core Pins delivers quality pins and sleeves for the Injection Mold Industry. We have been in the Industry for over 30 years and we are known for quality and fast deliveries. We specialize in machining wide varieties of materials to very complex geometries with dimensional tolerances to $\pm .00005$ ". Our manufacturing processes make us your single source solution for the most challenging of projects.

Pipette Industry

Precision Core pins has provided precision machining services to numerous companies involved in the Pipette Industry. We manufacture all sizes of pipettes. We will manufacture it exactly to your print specification.

Connector Industry

We are capable of producing miniature and micro products made of delicate materials utilizing proven processes such as centerless and cylindrical grinding, in addition to many other machining processes. We are your number one source for nano connectors. We can grind down to $.003$ of a diameter between centers.

Medical Industry

New products & technologies often require new methods of working materials to more precise tolerances. We are experienced at developing new parts and determining how best to machine a specific material and some of the materials we work with are Nitinol, Titanium, MoldStar 90, 150, Ampcoloy, tempered spring steel, Stainless Steels and tool steels. We also work with thin wall hypodermic tubing.
